

PoolMoss® and SpaMoss® Sphagnum Moss for Commercial Installations

Sphagnum Moss?

You bet.

Replicating nature's own methods, Creative Water Solutions uses Sphagnum moss to clarify and condition water, in a powerful solution for commercial pools, spas, (and fountains).

The results of our discoveries have generated remarkable results, which include:

- *Profound Improvements in Air and Water Quality*
- *Reductions in Chemicals*
- *Reductions in Heat, Energy, Water, and Utility Waste*
- *Reductions in Scaling and Corrosion*
- *Reductions in Backwashing*
- *Reductions in DBP Formation*
- *Stabilized pH and Alkalinity*

In our process, Sphagnum moss works much like a tea bag. The moss is placed inside a contact chamber, which allows it to interact and treat the pool/spa water. Once treated, the water helps with inhibition of organic matter, and allows sanitizers to eliminate bacteria more completely and efficiently.

- *With water and air that feels and smells as great as it looks, swimmers truly enjoy swimming again.*
- *Chemicals work more efficiently, which means that less are being used.*
- *Pool operations (such as backwashing and shocking) occur less frequently, which results in heating, energy, chemical, and water savings.*
- *Scale and corrosion are dramatically reduced and minimized, which helps the pool to look better, and function far more effectively.*
- *Aside from being remarkably powerful...it's as green as green gets.*

Creative Water Solutions remains committed to helping our customers achieve the truly remarkable benefits associated with our discoveries. Please contact your local distributor, or visit www.cwsnaturally.com.
